

AI Platform Pricing

Overview

Boomi Enterprise Platform is the one platform for Agentic Transformation by combining Integration & Automation, Data Management, API Management, and AI Agent Management. The AI Platform Pricing establishes AI Platform Editions and Message Tiers that allow customers to scale quickly and simply with Boomi.

Components

The AI Platform has three components:

1. Integration License
2. AI Platform License
3. AI Platform Message Tier

The Integration License will continue to follow your current integration pricing model.

The AI Platform License includes a Base, Pro, and Enterprise edition. All existing customers have access to the Base edition and can upgrade to the Pro or Enterprise editions that offer additional features and functionality.

The AI Platform Message Tier provides predictable scaling and volume-based message tiers. All AI Platform Licenses include the usage of up to 100K messages with additional message tiers available for purchase.

Platform Messages

Boomi Platform Message is a unified single pricing metric designed to simplify and streamline how customers use our AI Platform. Usage across each of our non-integration products is converted into a platform message based on a conversion factor which is driven by the value of each product's individual message. Messages are consumed by services both inside Agentstudio (e.g., an Agent calls an API) and outside Agentstudio (e.g., you create Golden Records that are not used by an Agent).

Message conversion is as follows:

- Flow: 100 Flow Launches = 1 Platform Message
- Event Streams: 100 Events = 1 Platform Message
- MDH: 1 Golden Record = 12 Platform Messages
- APIM: 1 API Call = 1 Platform Message
- Control Plane: 1 API = 30,000 Platform Messages
- Data Integration (Rivery): 1 BDU = 50 Platform Messages
- AI: 1 Prompt = 100 Platform Messages

Message Tiers

Where usage approaches the maximum number of Boomi Platform Messages in a particular tier, Boomi shall notify Customer, and Customer shall purchase additional capacity. Additional capacity tiers purchased will be prorated to the remaining term of your agreement, with the applicable capacity and cost being reduced accordingly for the remainder of the current subscription year.

Example:

- Reach the message tier limit and purchase the next Message Tier
- The Message Tier is prorated to the remainder of the subscription year
- Next subscription year's invoice will include the next Message Tier
